☐	**HP13**	Sensitizer	☐	**HP14**	Ecotoxic		

Withdrawl conditions

- ⇨ The service is activated after defining the transport conditions and any disposal costs.
- ⇨ The IBC to be disposed of must be empty.
- ⇨ Valves and other closures must be functional and tightened to prevent any spillage of any residues during transport.
- ⇨ Plaques and / or identification plates must be mounted.
- ⇨ The original labels of the last filling product, in accordance with the transport regulations currently in force, must not be removed or made illegible.
- ⇨ In the event that the withdrawn container does not comply with the requirements listed above, the costs relating to the disposal / remediation of residues, heavy bottoms, unacceptable sludge will be calculated and finalized.

The transporter in charge has the right not to carry out the withdrawal or to carry out a partial withdrawal if, during the loading phase, one of the previous conditions is not respected.

By completing this withdrawal form, the requesting company undertakes to accept and comply with the conditions indicated
